Overview

Connect to CVS is a newly-added function in GlobalSight version 7.1.4 and 7.1.5. It allows to connect to a CVS repository, get contents from CVS server, CVS module mapping and submit to create job to GlobalSight and then update contents back to CVS server.

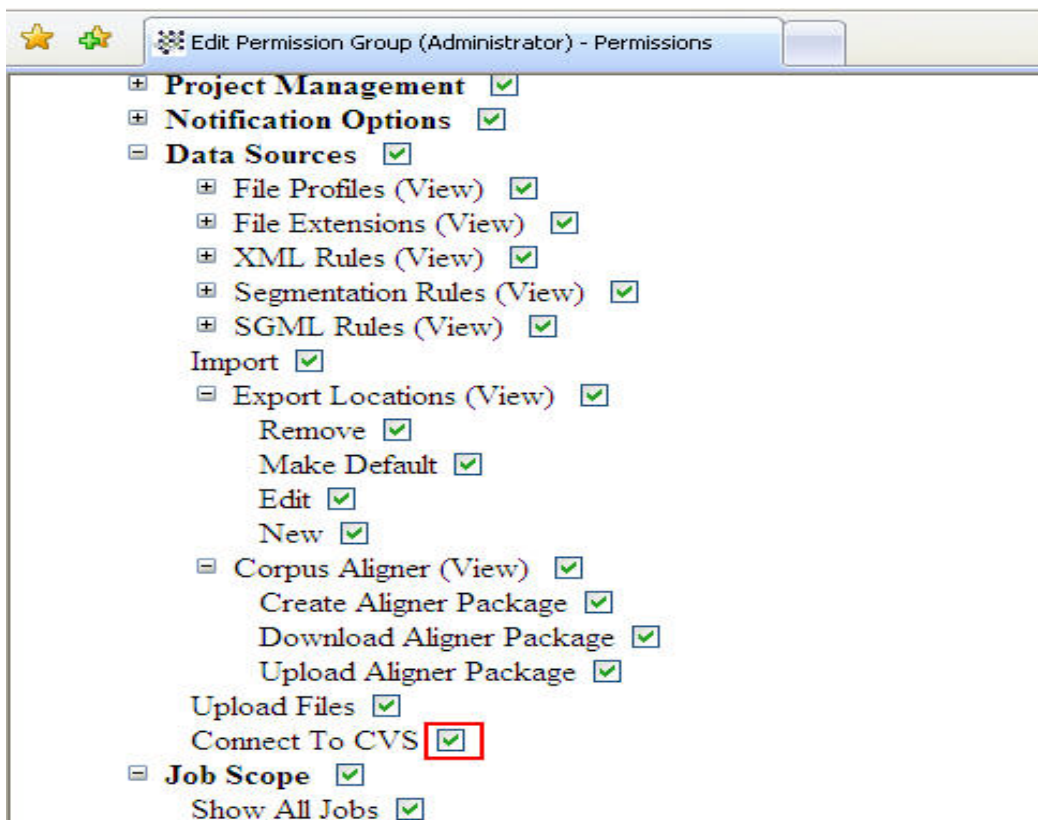

“Connect to CVS” is available at submenu of “Jobs” menu. User login to DesktopIcon must have “Connect To CVS” (under “Data Sources” item in Permission Group) enabled.

Prerequisites

You must have WINCVS installed. GlobalSight server must be running release 7.1.5 or later.

Connection to CVS

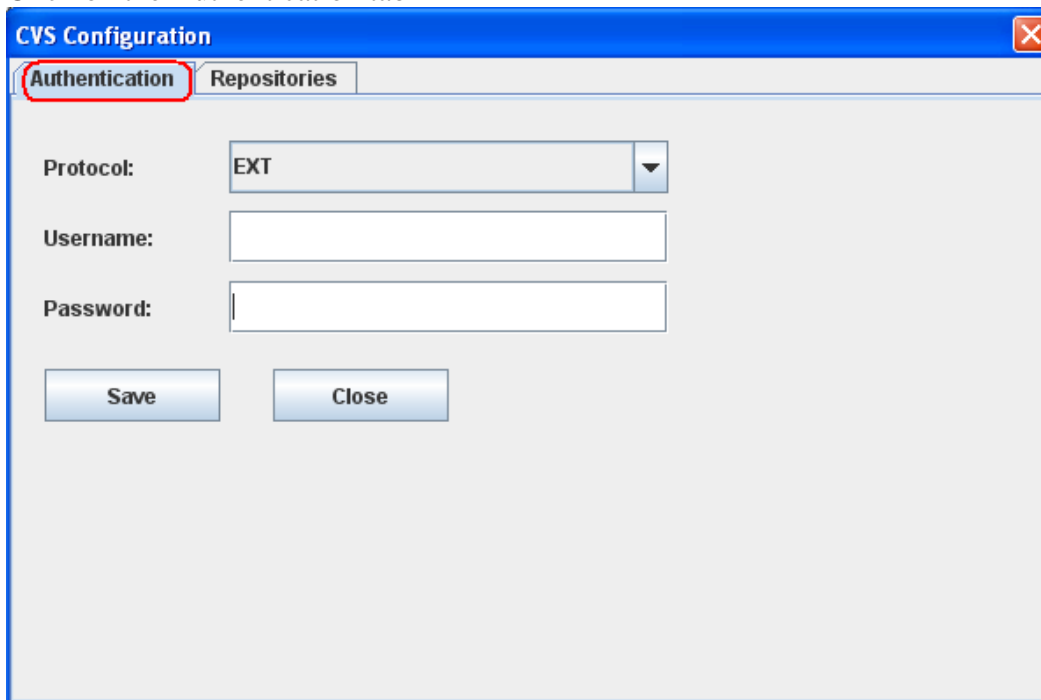

“Connect to CVS” appears at submenu of “Jobs” menu, after check/enable “Connect To CVS” permission under “Data Sources” item in Permission Group.

CVS Configuration

1. Authentication

Click on the Authentication tab

The image shows a screenshot of a 'CVS Configuration' dialog box. The title bar is blue with the text 'CVS Configuration' and a red close button. There are two tabs: 'Authentication' (which is selected and highlighted with a red rectangle) and 'Repositories'. The 'Authentication' tab contains the following fields: 'Protocol:' with a dropdown menu showing 'EXT'; 'Username:' with an empty text box; and 'Password:' with an empty text box. At the bottom of the dialog are two buttons: 'Save' and 'Close'.

Choose Protocol, enter the Username and Password in Authentication menu, and click “Save” button.

Example:

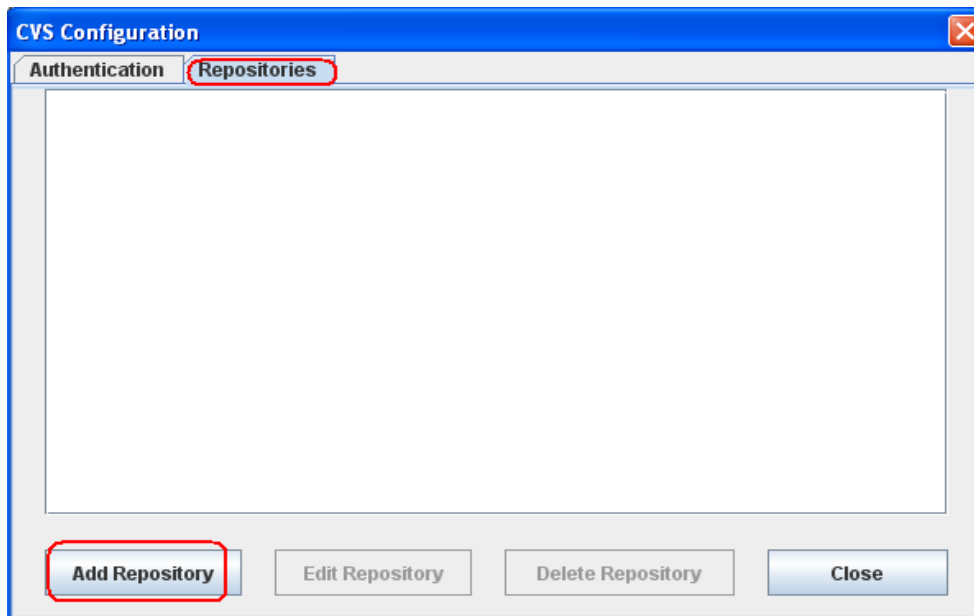

Protocol: PSERVER

Username: globalsight

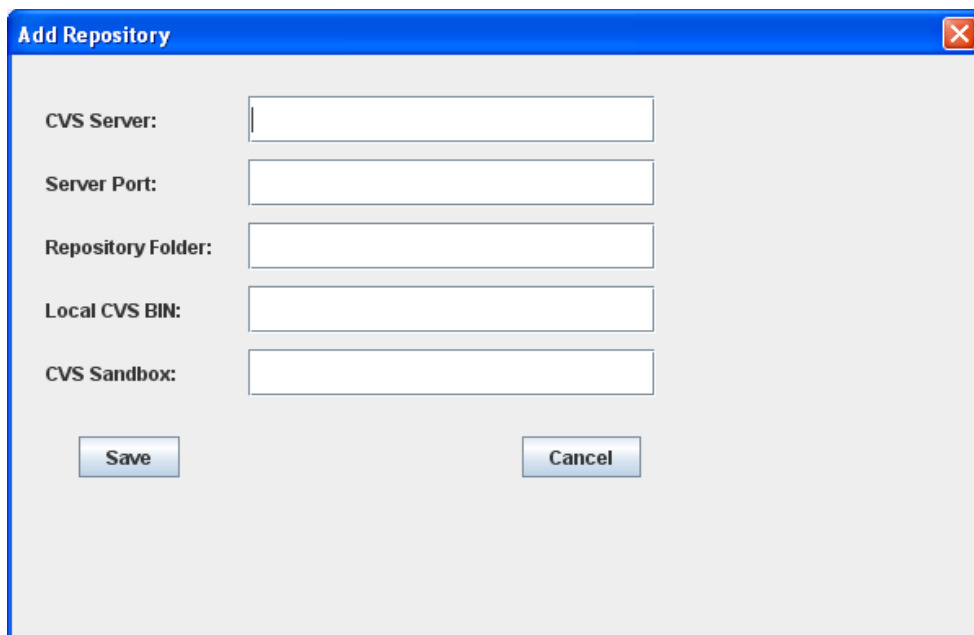

Password: *<password for the CVS user>*

2. Create Repositories:

- a. Click on the **Repositories** tab.

- b. Click “Add Repository” button.

Fill out CVS Server, Server Port, Repository Folder, Local CVS BIN, CVS Sandbox, and click the “**Save**” button.

CVS Server is the IP address or hostname of CVS server.

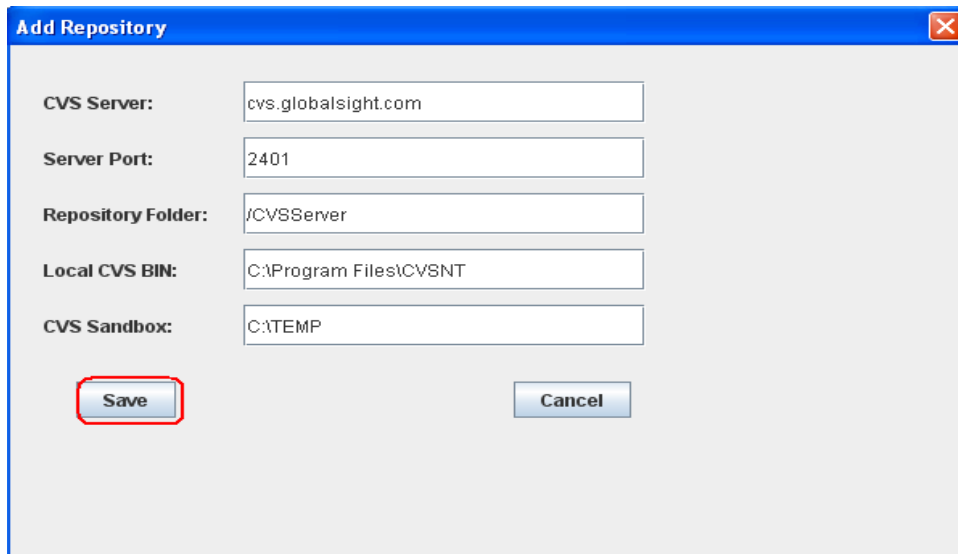

Server Port is the port of CVS server. 2401 is the default port number for PSERVER protocol, 22 is the default port number for EXT protocol.

Repository Folder is the storage location which contains the modules CVS server manages.

Note: Make sure you have installed CVSNT on your local computer.

Local CVS BIN is the path of cvs.exe, ie C:\Program Files\CVSNT.

CVS Sandbox is the path of your local folder/directory where you want to checkout.

A Repository is displayed as:

:pserver:globalsight@cvs.globalsight.com:/CVSServer;C:\TEMP;C:\Program Files\CVSNT

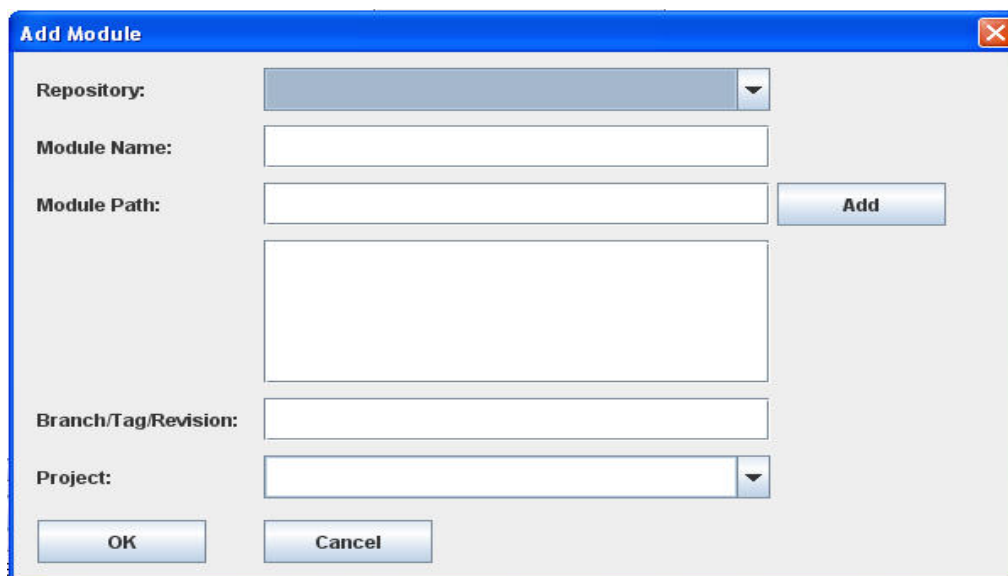

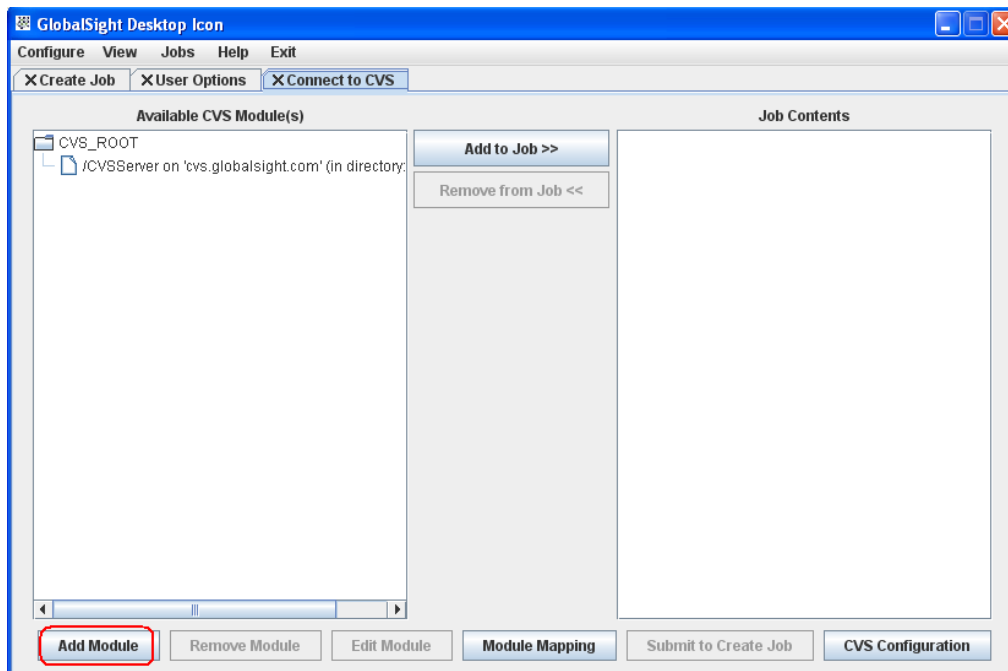

Edit or Delete Repository by clicking “**Edit Repository**” or “**Delete Repository**” button.

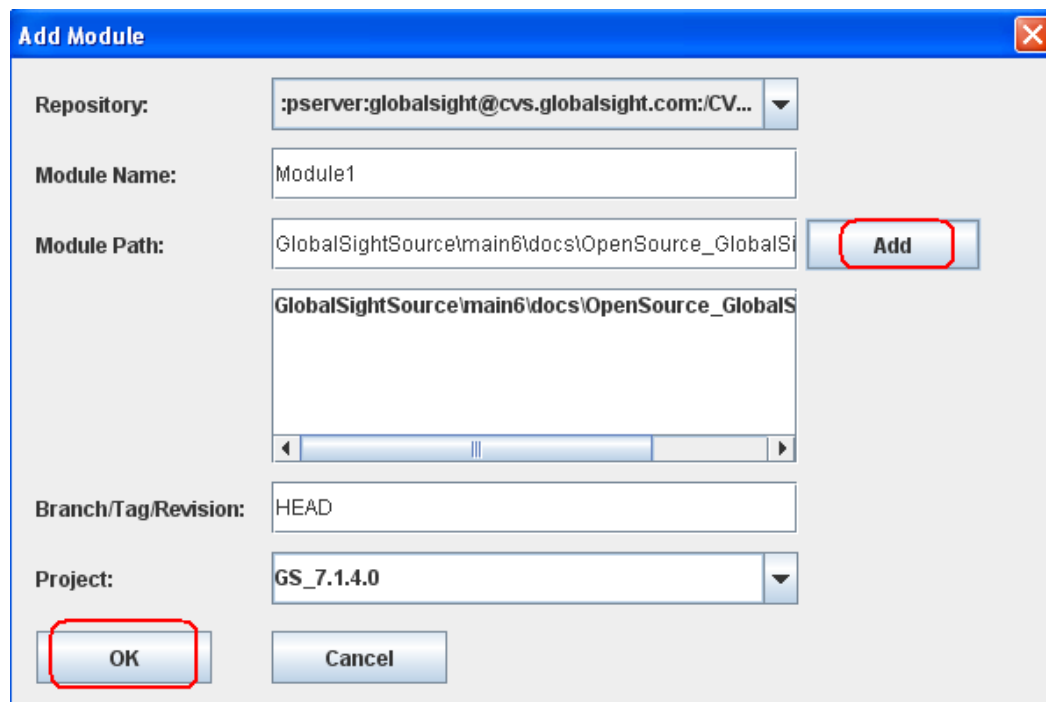

Click the “**Close**” button to close the CVS Configuration.

3. Add Module

- a. Invoke Add Module menu by Click “**Add Module**” button.

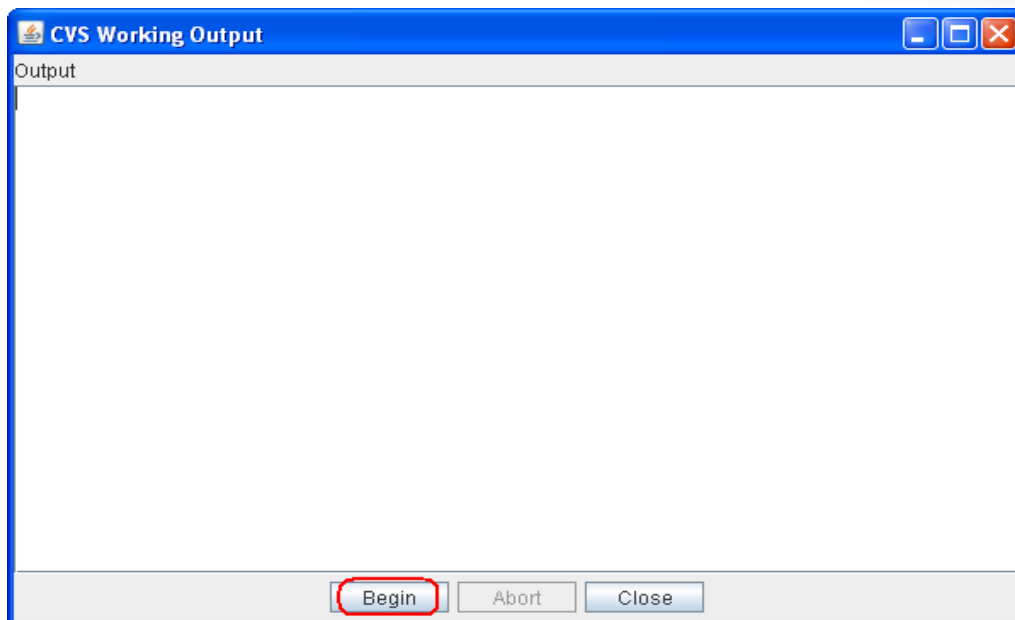

Select newly-added Repository and fill out Module Name.
Fill out valid Module Path and click “**Add**” button. Adding multiple Module Paths is supported.
Fill out Branch/Tag/Revision. Fill out Project or select project if project(s) is available.

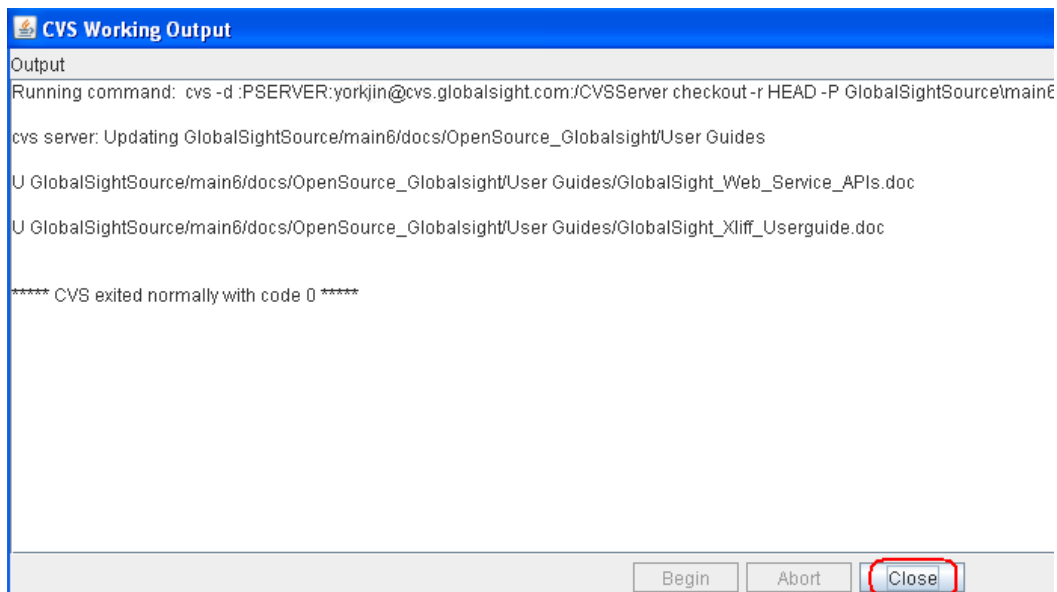

An example of Module setting:

Repository: :pserver:globalsight@cvs.globalsight.com:/CVSServer;C:\TEMP;C:\Program Files\CVSNT
Module Name: Module1
Module Path: Globalsightsources\main6\docs\OpenSource_GlobalSight\User Guides
Branch/Tag/Revision: HEAD
Project: GS_7.1.4.0

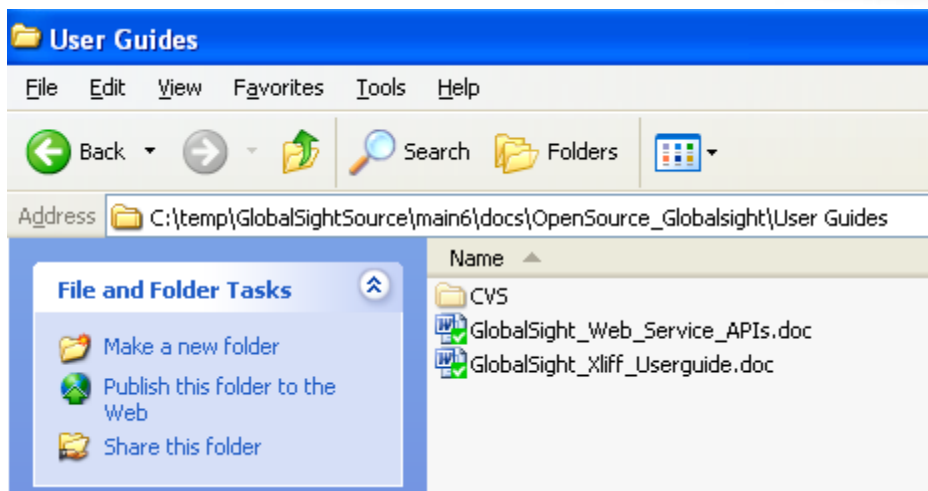

“**CVS Working Output**” window will appear automatically after click “**OK**” button.

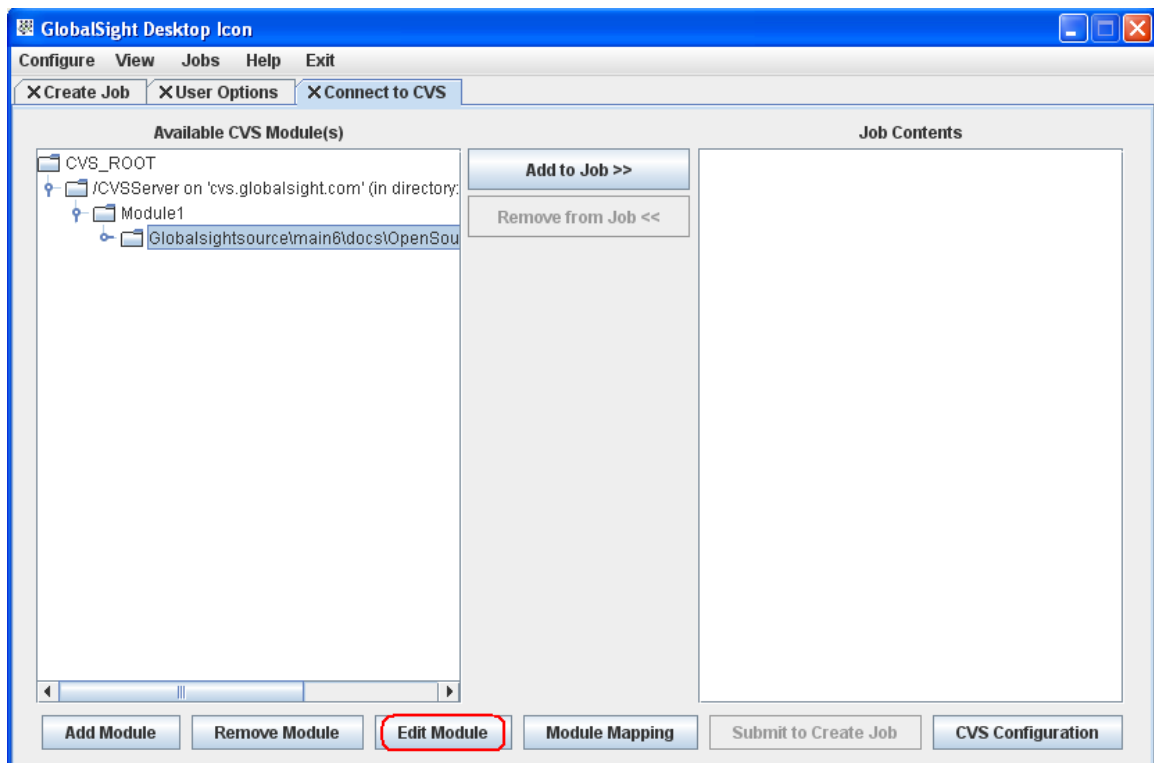

Click on "**Begin**" button to begin Checkout of files. You can cancel the CVS Output by clicking the "**Abort**" button.

In this example, two doc files have been checked out from CVS server. Click on "**Close**" to close the current window.

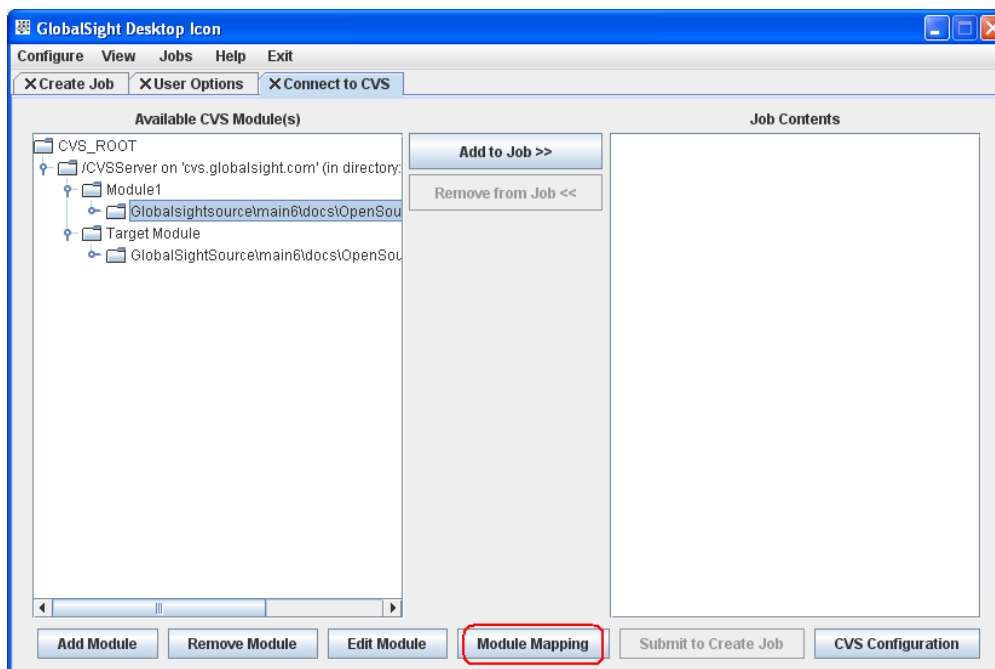

To check out the Module1 again, high light the "Module1" and click on "**Edit Module**" button.

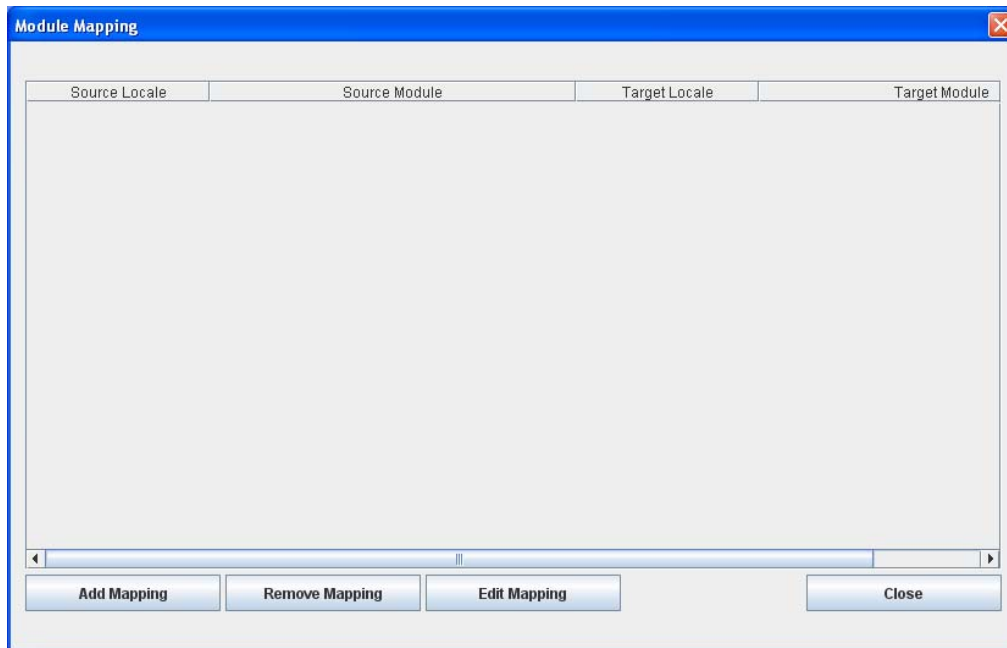

4. Module Mapping

You can map a directory or file name rule to a module on the CVS server, so that when a job was exported, the file will be uploaded to the specific target module automatically.

Invoke Module Mapping function by clicking the “**Module Mapping**” button.

Module Mapping dialog window :

Source Locale: Locale of source file

Source Module: Path of source file in CVS server

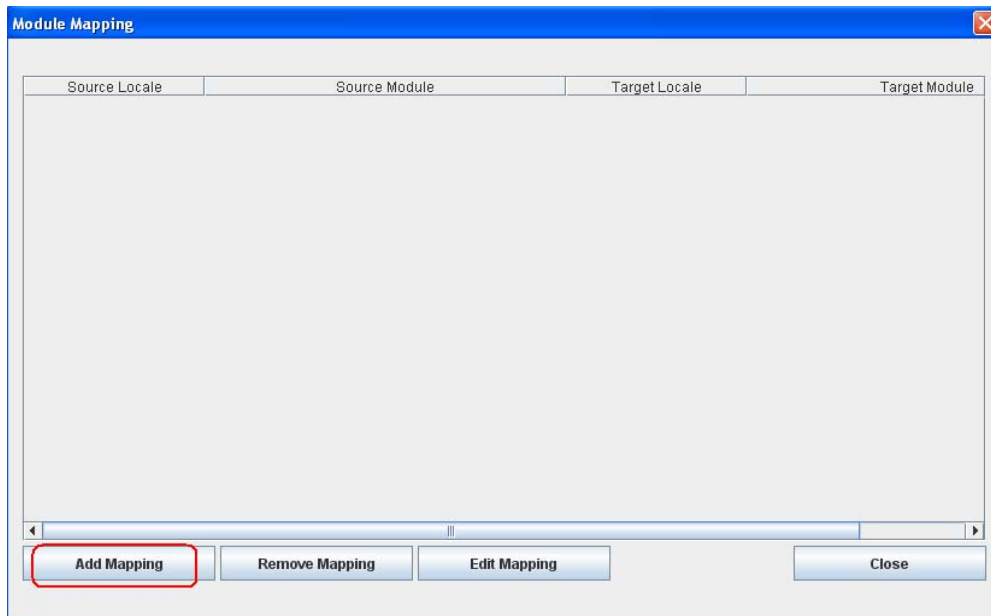

Target Locale: Locale of target file

Target Module: Target directory in CVS server, which stores the final localized files from the exported jobs.

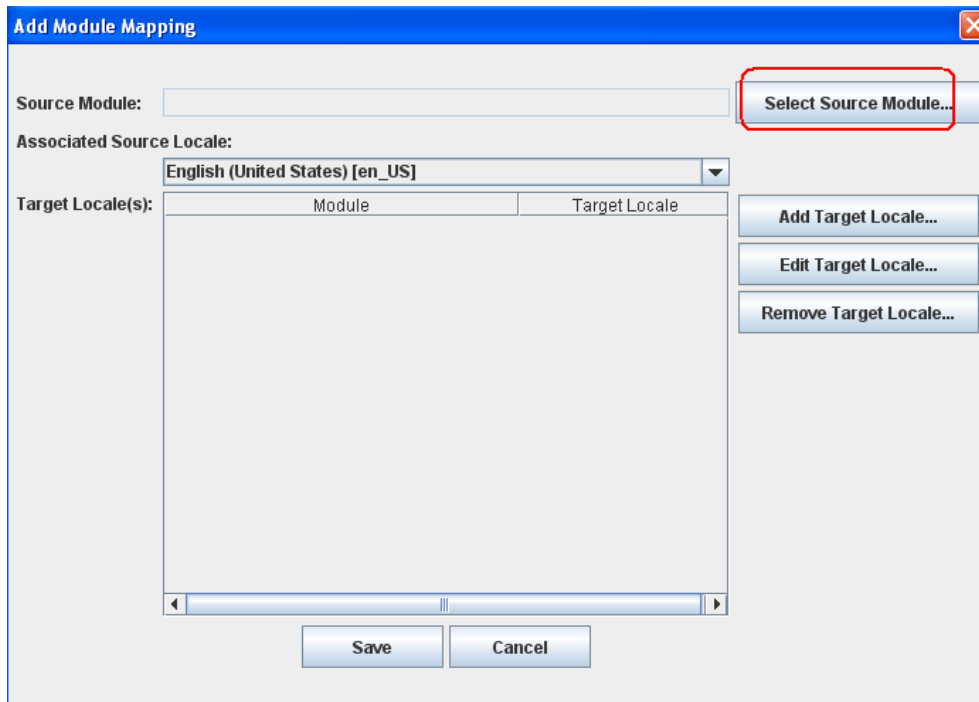

Use the **Add Mapping**, **Edit Mapping** and **Remove Mapping** dialog boxes to add new, edit or delete existing module mapping on the CVS server.

a. Add Mapping

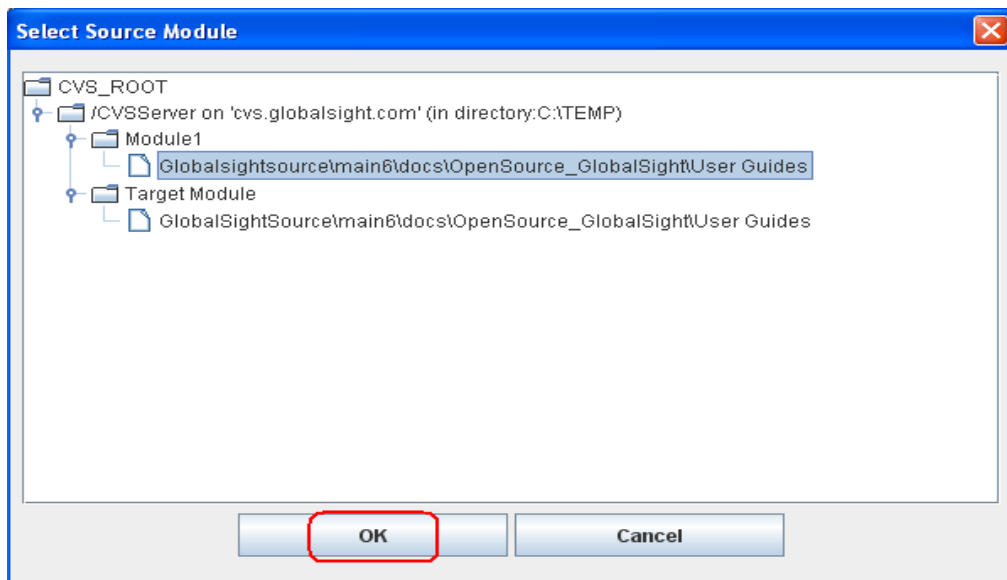

Click “Add Mapping” button to invoke “Add Module Mapping” window

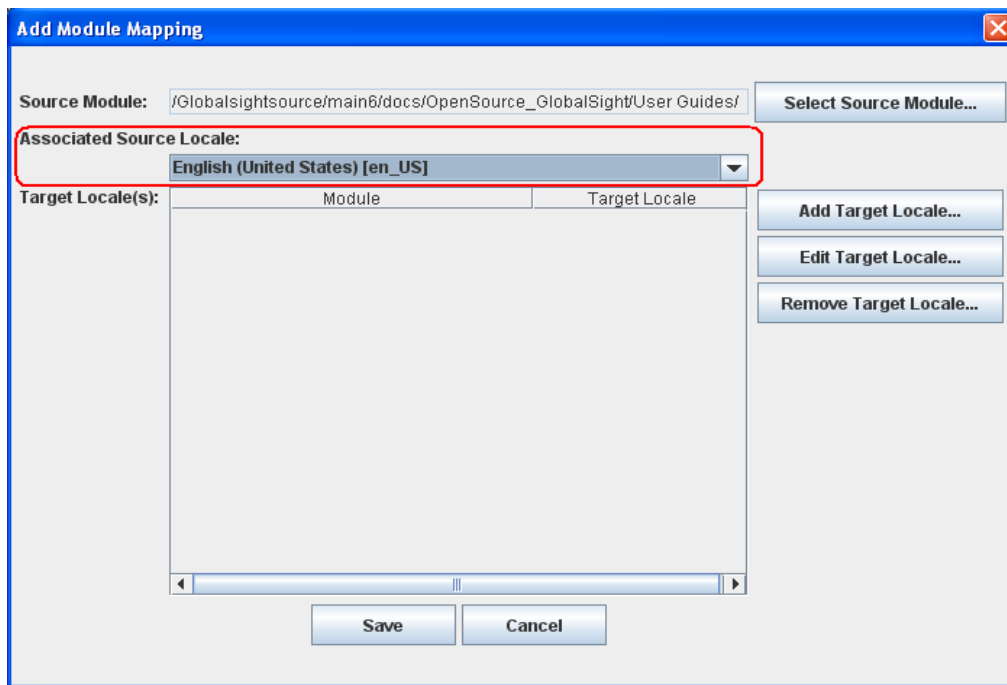

Click “Select Source Module...” button to choose the source module directory

Such as: \GlobalSightSource\main6\docs\OpenSource_GlobalSight\User Guides.
Then click **OK** in Select Source Module dialog.

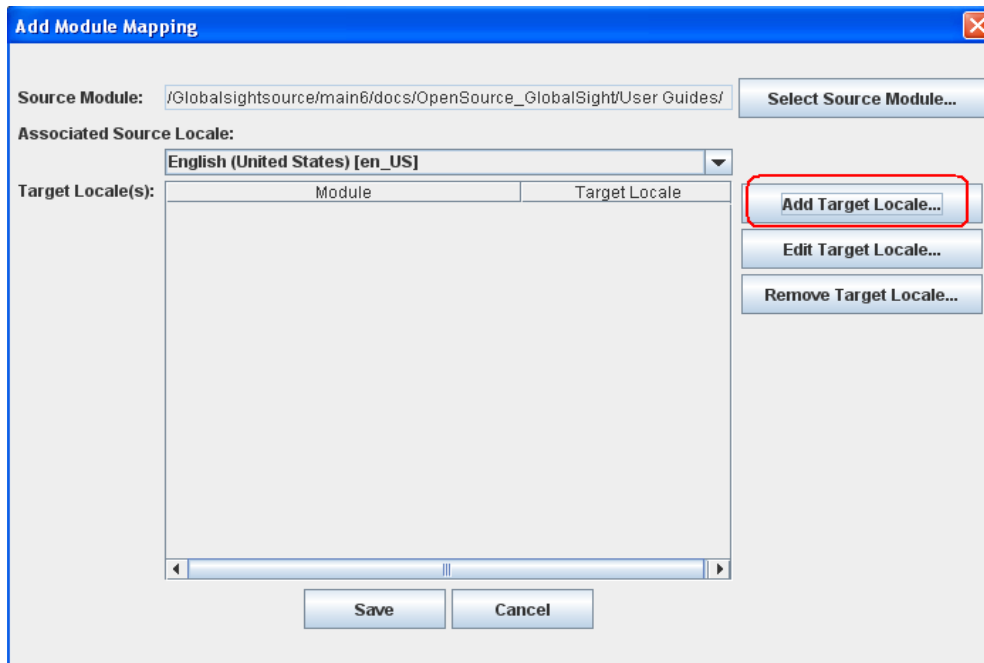

Choose the **Associated Source Locale** in Add Module Mapping window, for example, English (United States) [en_US]

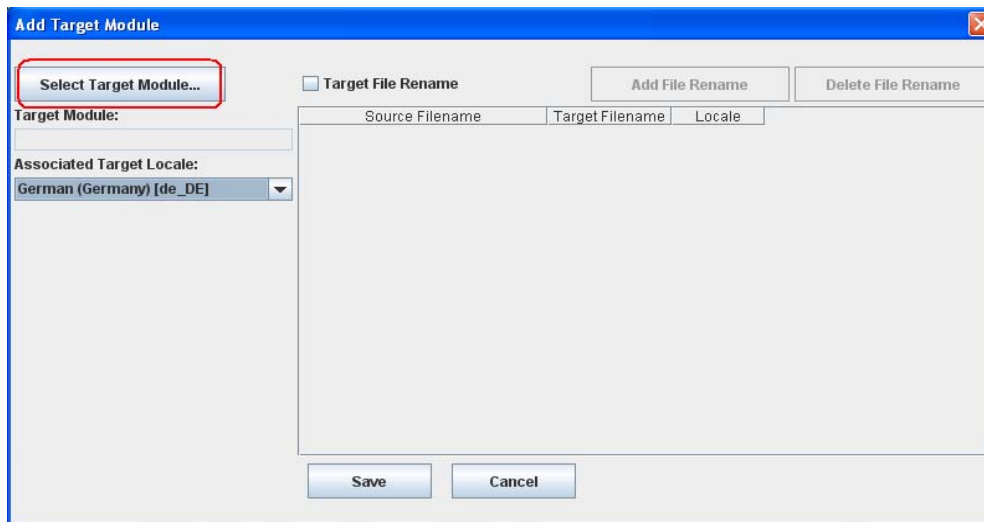

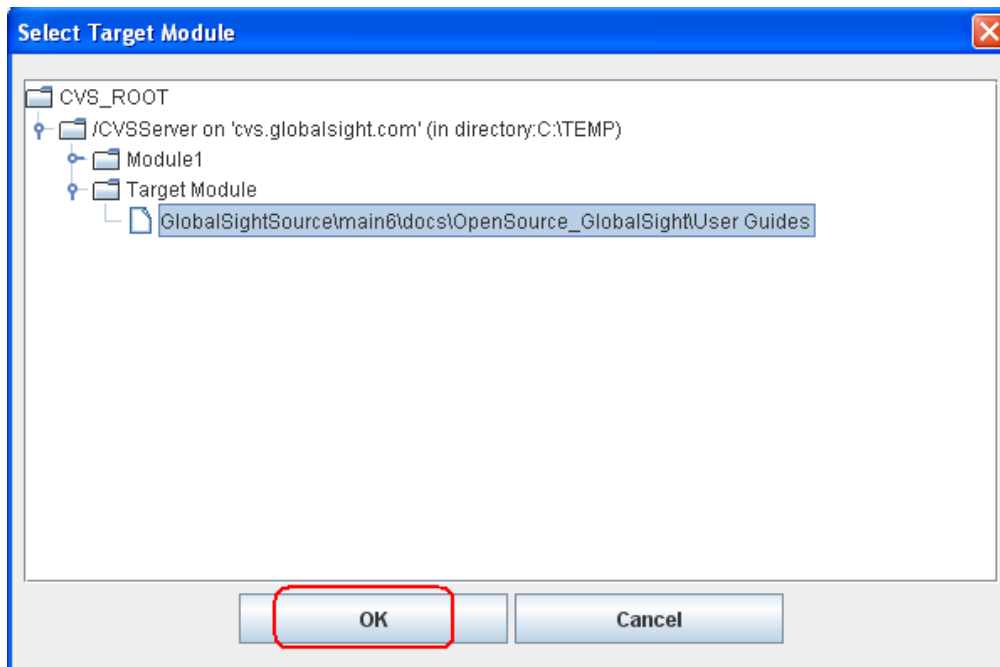

b. Add Target Locale

Click “**Add Target Locale...**” button to add the info of target module:

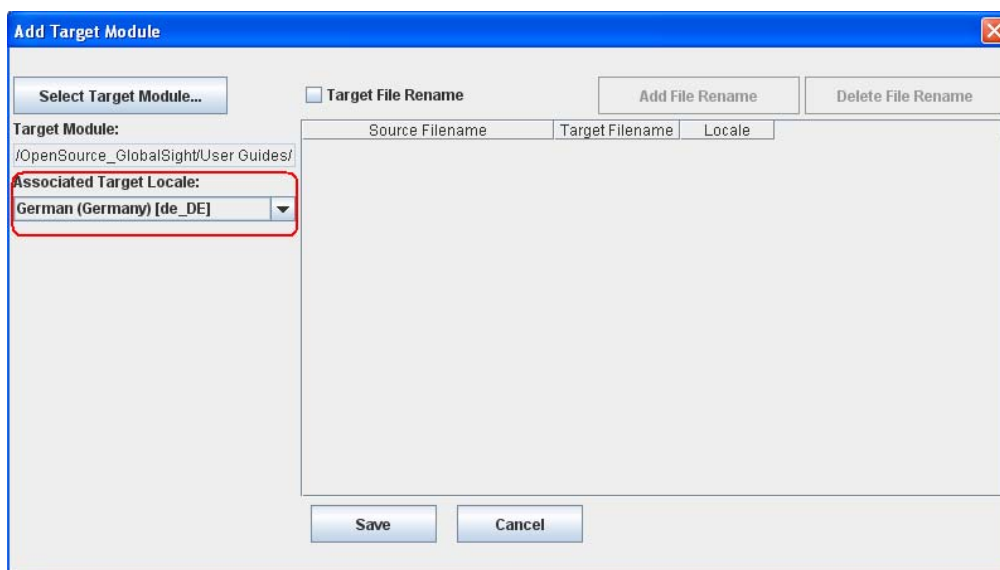

Click “**Select Target Module...**” button to choose the target module in Select Target Module window

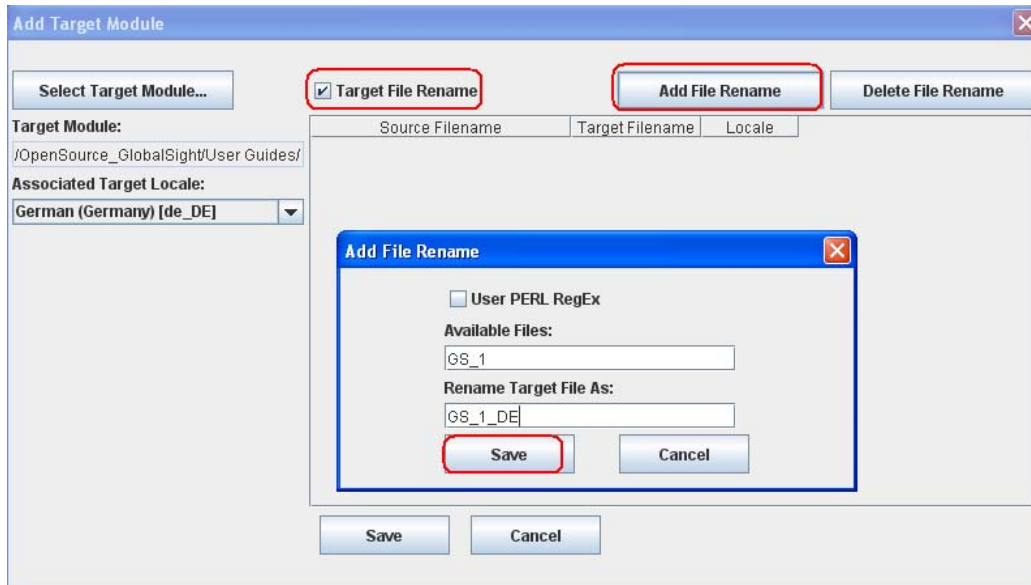

Click **OK**.

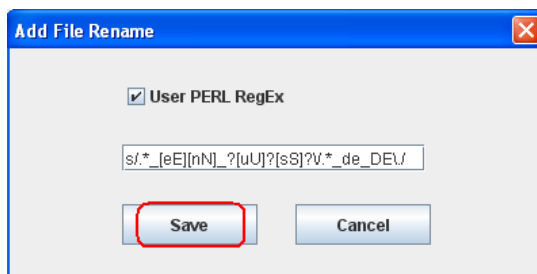

Then select the “**Associated Target Locale**”, eg, German (Germany) de_DE

If you want to change the target file name when updating to CVS server, check **“Target File Rename”**, and click **“Add File Rename”** button to identify the rename rule. Click **Save** to add the file rename rule.

Or you could also choose to use PERL Regular Expression style in Add File Rename dialog:

Click **Save** to add the file rename rule to the list.

Click **Save** in Add Target Module.

The 'Add Target Module' dialog box has a blue title bar with a close button. It contains a 'Select Target Module...' button, a checked 'Target File Rename' checkbox, and 'Add File Rename' and 'Delete File Rename' buttons. Below these is a table with columns 'Source Filename', 'Target Filename', and 'Locale'. The table contains two rows: 'GS_1' mapping to 'GS_1_DE' for 'de_DE', and a wildcard pattern mapping to a similar pattern for 'de_DE'. Below the table is a dropdown for 'Associated Target Locale' set to 'German (Germany) [de_DE]'. At the bottom, the 'Save' button is highlighted with a red rectangle, next to a 'Cancel' button.

Source Filename	Target Filename	Locale
GS_1	GS_1_DE	de_DE
/.[eE][nN]?[uU][sS]?V.*_de_D...	*/.*[eE][nN]?[uU][sS]?V.*_de_D...	de_DE

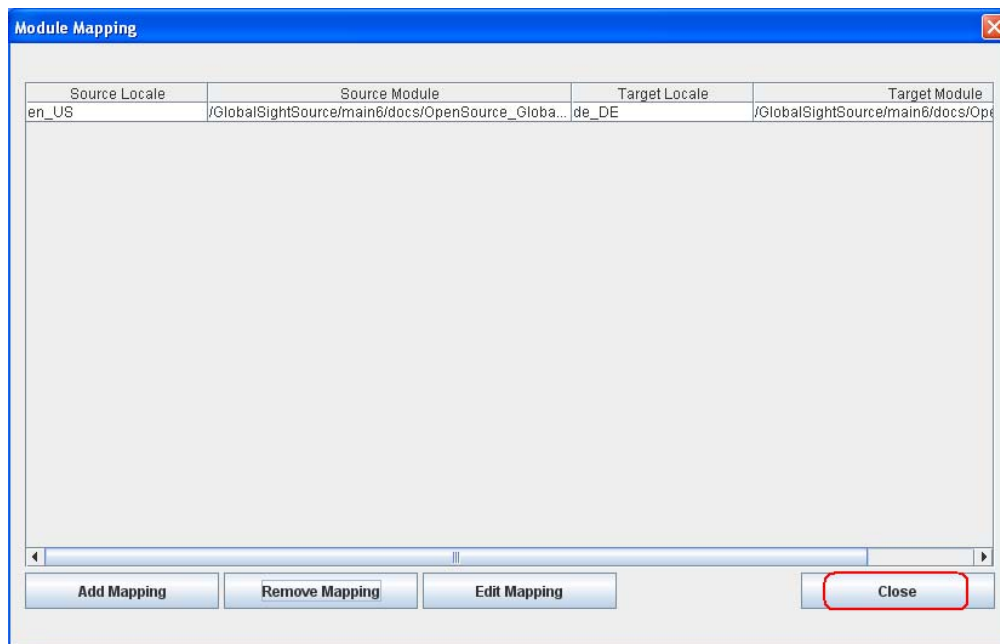

Then the target module info shows in “Add Module Mapping” window.

The 'Add Module Mapping' dialog box has a blue title bar with a close button. It contains a 'Source Module' text field with a path, a 'Select Source Module...' button, and an 'Associated Source Locale' dropdown set to 'English (United States) [en_US]'. Below is a table for 'Target Locale(s)' with columns 'Module' and 'Target Locale'. The table contains one row with a truncated path and 'de_DE'. To the right of the table are buttons for 'Add Target Locale...', 'Edit Target Locale...', and 'Remove Target Locale...'. At the bottom, the 'Save' button is highlighted with a red rectangle, next to a 'Cancel' button.

Module	Target Locale
/GlobalSightSource/main6/docs/OpenSour...	de_DE

Click **Save**.

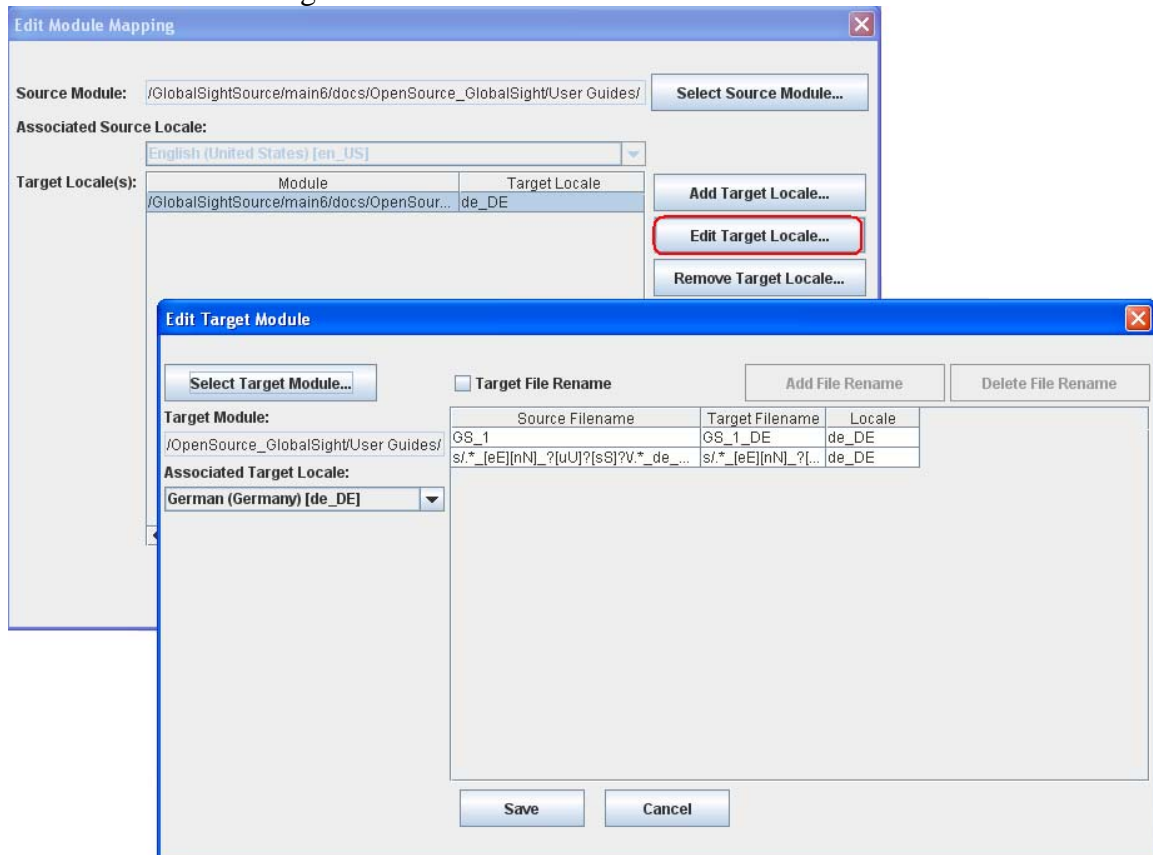

- c. The mapping info displayed in “Module Mapping” window:

Click **Close**.

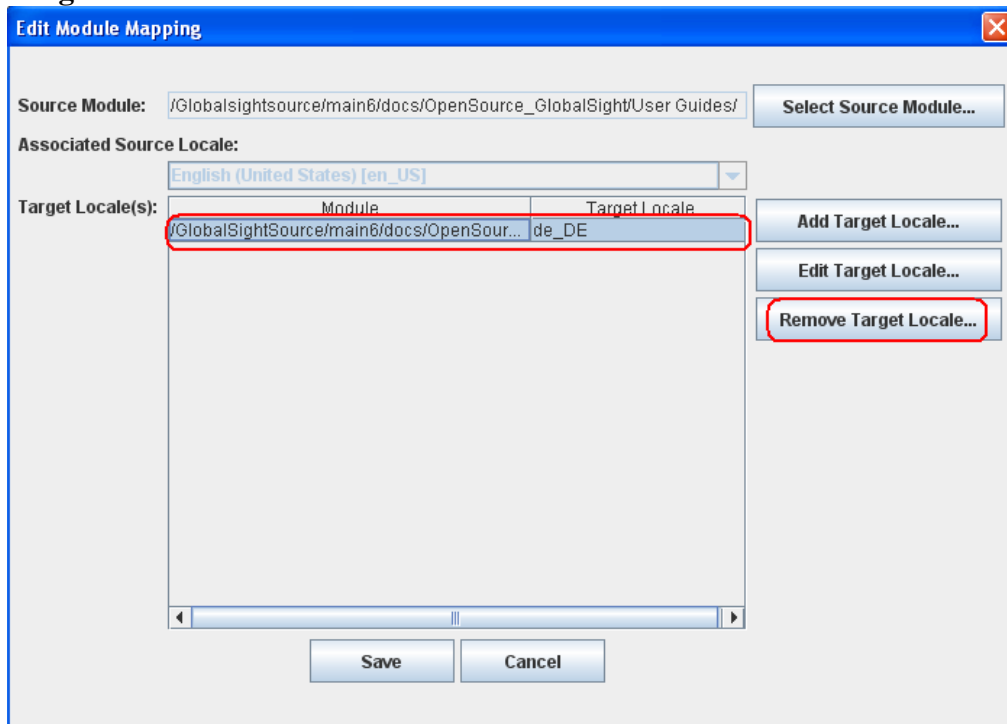

d. Edit Target Locale

If you want to change the saved target file info, just select the record in the list and click “Edit Target Locale...” button.

e. Remove Target Locale

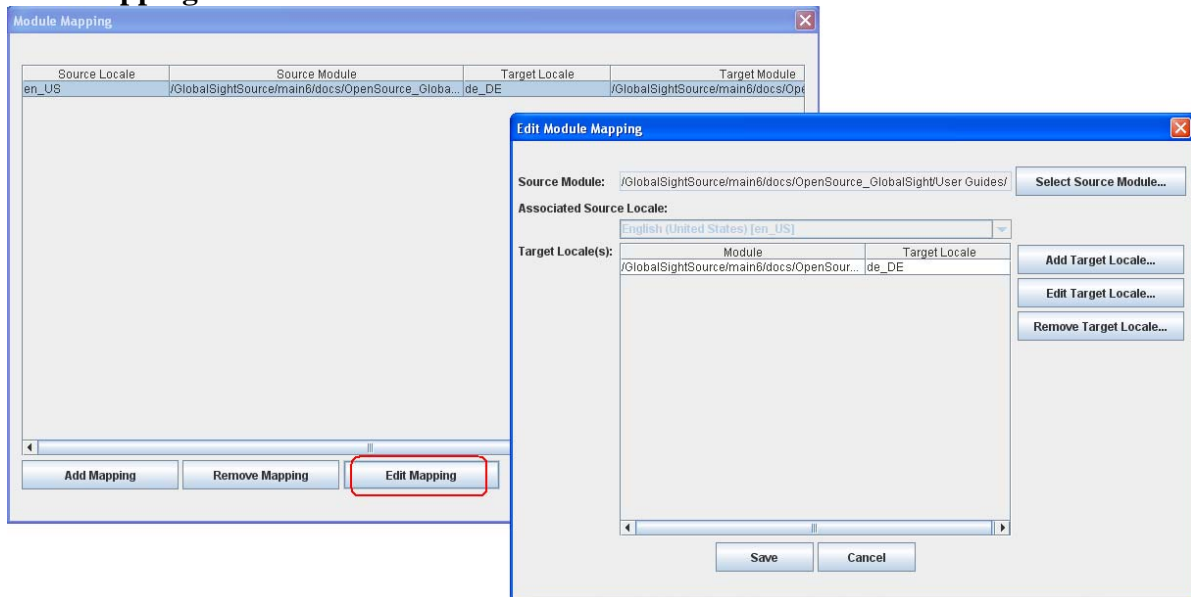

Select an existed target locale record you want to remove and click the “**Remove Target Locale...**” button.

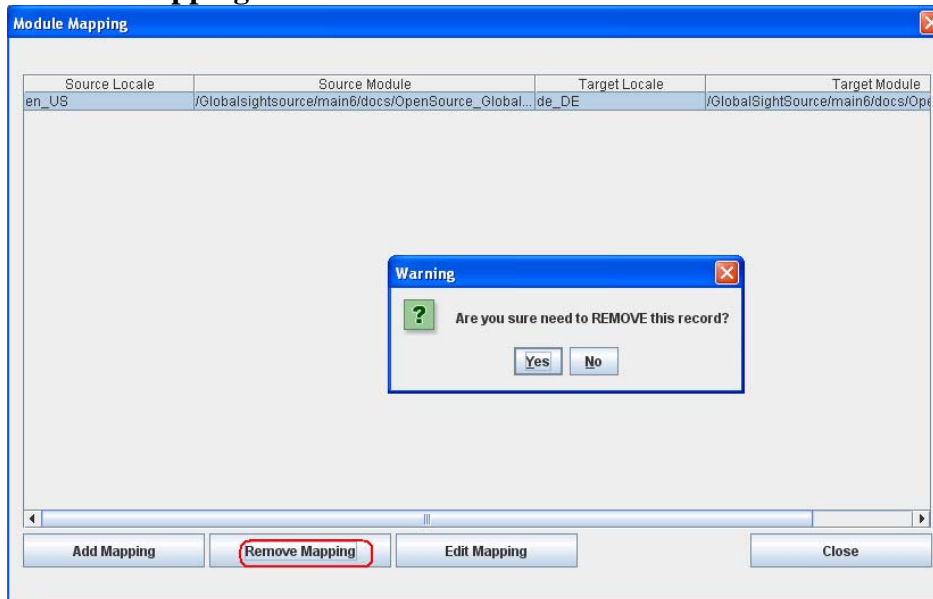

f. Edit and Remove Module Mapping

In Module Mapping window, use the **Remove Mapping** or **Edit Mapping** dialog boxes to remove or edit an existing module mappings on the CVS server.

Edit Mapping

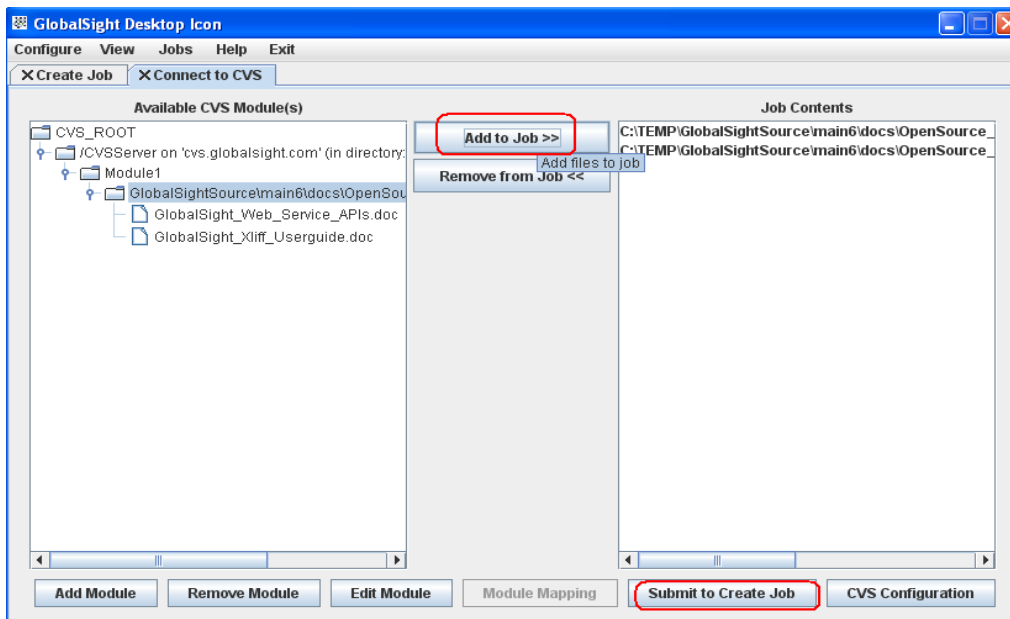

Remove Mapping

5. Submit to Create Job

Select files and add them by clicking “Add to job”.

Click on “Submit to Create Job” to start GlobalSight DesktopIcon Job creation process.
